

Information Technology

Information technology is changing the way we do business every day. Technology delivers critical information where it needs to be at the right time. Every service provider's willingness to tackle the IT challenges in the supply chain, and it's success in finding and implementing integrated solutions, is defining itself as the team player everyone needs.

Dynamic International prides itself on it's ability to develop and maintain customized IT solutions to suit our customers specific needs. At the same time we are committed to compliance with any data sharing platforms and systems requirements our customers already have in place or plan to implement. Dynamic utilizes cutting edge mainframe and web-based processing systems to drive all our internal and external data collection and distribution requirements and initiatives. Dynamic is respected throughout the industry for our approach and success in our IT development over the years. That's because we have always approached our IT development with our customers eyes as an urgent process requiring our pro-active commitment. Our own internal development has yielded a highly respected array of apparel warehousing and transportation IT concepts and systems that provide full integration options to all our customers in every division.

From real-time shipment status event updates, to PO file downloads and maintenance, to inventory stock control and management, to GPS equipment tracking, automated web portal updates, full range EDI transactions, Dynamic has established itself as a proven member of their customer's logistics team.
