

Ocean and Air CFS

Dynamic owns and operates fully US Customs bonded CFS services, warehousing capacity, and trans-loading services at the airports and nearby steamship line piers. Services include AMS customs entry and release, freight recovery, de-consolidation and consolidation. Our airport freight management teams and operations are well known in the airport and pier community for quick reliability and full accountability. We work closely with all our customers' Brokers and Forwarders to coordinate and expedite the smooth transition of inbound shipments from the moment an aircraft lands or a ship docks.

Dynamic provides full airfreight and ocean freight trans-loading services, specializing in hanging garments (GOH/Garment on Hanger) and Flat Pack apparel shipments. We are fully capable of stripping any air cans and ocean containers of any specification, verifying contents against packing lists, and providing the receiving information electronically back to our customers. Our operations have the capacity to offer staging opportunities to consolidate air or ocean shipments with any other ocean or air shipments that may be on hand to help our customers realize cost savings wherever possible. Our turn time is 24 hours, including pickup at the airport or pier, strip, verify and trans-load to an outbound carrier.

Our CFS operations take full advantage of all our sibling transportation divisions resources nationwide to expedite and flow product out of the gateway bottlenecks and into the customer's control, with full visibility and accountability all the way through the process.
